

zed-pdf test document

A 5-page sample PDF for checking the Zed markdown-preview viewer.

Generated with Ghostscript. No external assets, no embedded images.

What each page checks

p.2 Color fidelity - flat fills, a gradient, hairline strokes

p.3 Text legibility - a 6pt to 24pt size ladder

p.4 Vector graphics - a bar chart with axes and labels

p.5 Dense layout - a 12-row table with hairline rules

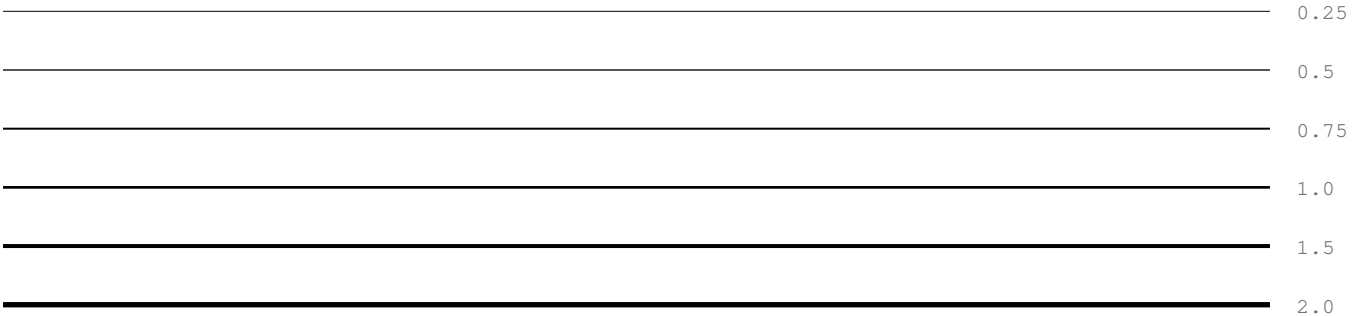

2. Color fidelity

flat fills

gradient - look for banding

hairlines 0.25pt to 2.0pt - the thin ones vanish at low DPI

3. Text legibility ladder

18 The quick brown fox jumps over the lazy dog 0123456789

16 The quick brown fox jumps over the lazy dog 0123456789

14 The quick brown fox jumps over the lazy dog 0123456789

12 The quick brown fox jumps over the lazy dog 0123456789

11 The quick brown fox jumps over the lazy dog 0123456789

10 The quick brown fox jumps over the lazy dog 0123456789

9 The quick brown fox jumps over the lazy dog 0123456789

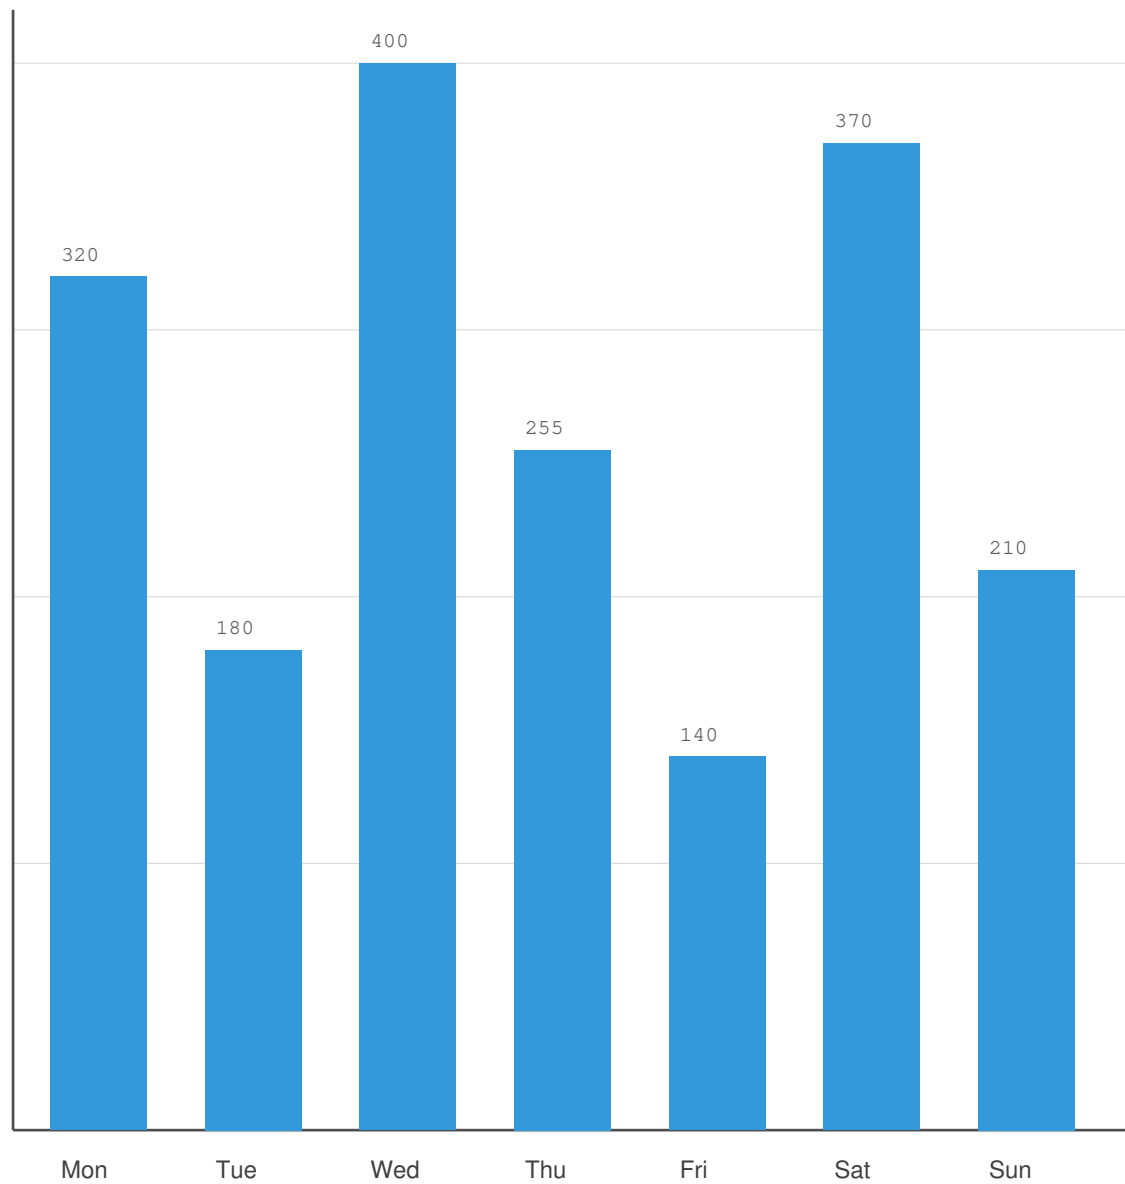

8 The quick brown fox jumps over the lazy dog 0123456789

7 The quick brown fox jumps over the lazy dog 0123456789

6 The quick brown fox jumps over the lazy dog 0123456789

At 144dpi the 6-7pt rows should still be readable. If not, rerun with --dpi 220.

4. Vector chart

5. Dense table

id	component	status	latency	owner
01	auth-gateway	healthy	12ms	platform
02	session-store	healthy	4ms	platform
03	render-worker	degraded	188ms	media
04	thumbnailer	healthy	31ms	media
05	search-index	healthy	9ms	discovery
06	recommender	degraded	240ms	discovery
07	billing-sync	healthy	17ms	payments
08	webhook-relay	down	–	payments
09	audit-log	healthy	6ms	security
10	key-rotation	healthy	22ms	security
11	mail-queue	healthy	45ms	comms
12	push-fanout	degraded	310ms	comms

End of test document. If all five pages rendered, zed-pdf is working.
